BASTROP, TX

FPI Bastrop: Making Sure You Are Always Ready to Roll

Federal Prison Industry of Bastrop, Texas provides high-quality, mission-ready vehicles to a variety of federal law enforcement agencies, including US Border Patrol and the US Marshals Service. We currently employ 17 staff members and 308 corrections inmates to handle all aspects of our customers' fleet purchases and deliveries across the United States and to Hawaii, Puerto Rico and the US Virgin Islands.

The FPI Bastrop facility features two fully staffed Auto Cad design areas, one dedicated to decals and striping, and the other to a fully operational metals fabrication shop, allowing us to quickly and efficiently meet the unique needs of each customer. At FPI Bastrop, we are proud of our ability to implement all projects with maximum efficiency, from initial input to design and development, to the finished product.

Whatever the need, we can handle it

The FPI Bastrop Upfitting operation supplies customers with:

- Light- and heavy-duty trucks
- Jeeps
- Sport utility vehicles
- Three types of HMMVs, including prototype SRV all-terrain vehicles
- Customized sedans, vans and busses
- Non-law enforcement vehicles, such as cab and chase heavy trucks

The tools and equipment to get the job done

The employees at FPI Bastrop are fully trained to operate the modern machinery and equipment located throughout the facility. Most of the mechanical tools are powered by a 300 gallon air compressor that pumps 92 to 110 psi, delivered to all work bays via drop lines. Each production area is supplied with

standard automotive tools and equipment, and the facility also has:

- Fully vented and certified drive-in paint booth/dryer
- A Hobart Betamig 250 welder

CERTIFICATIONS

FPI Bastrop has received its American Correctional Accreditation (ACA) and employs two procurement agents with authorized warrants to purchase materials under the Federal Acquisition Regulation (FAR). All production foremen are certified Universal Technicians; and the Quality Assurance Manager has completed all required quality assurance courses. The QA department is ISO 9001: 2000 certified.
